*Game designer, software engineer,
web developer, and more*

SKILLS

- Technical experience with Visual Studio, C#, Unity, and developing game prototypes.
- Careful attention to detail, with the ability to formulate solutions to problems as they arise.
- Skilled at understanding user needs and finding solutions through research, creativity, and independent thinking.
- Eager for new knowledge and experiences, with the ability to learn and adapt to new skills.

EDUCATION

Introduction to Game Design Online
CG Spectrum October 2020 – February 2021

- Game systems and mechanics, how to deconstruct games to better understand how they were designed, and how to design and prototype my own games.

Application Development Leawood, KS
Centriq Training November 2015 – June 2016

- Visual Studio, C# .NET, ASP.NET, MVC, SQL, SQL Server, HTML 5, CSS3, JavaScript, jQuery, RESTful API, Entity Framework, responsive and mobile development, professional IT project experience.

Bachelor of Business Administration Springfield, MO
Drury University August 2009 – December 2012

- Major in Computer Information Systems.
- Graduated with Honors, GPA: 3.91.

WORK EXPERIENCE

Principal Engineer/Architect I Overland Park, KS
MSTS (Multi Service Technology Solutions) July 2017 – Current

- Maintain and modify legacy applications (Perl, Pro*C) according to internal and external client requests, and support on-call and ad hoc reporting efforts.
- Design and build new client-facing features using a Ruby on Rails API and Vue.js front-end.
- Pioneered front-end development with Vue.js and Quasar Framework, helped develop an enterprise-wide style guide, and built a shared component library to make front-end development more efficient and consistent across teams and products.

Software Engineer Overland Park, KS
UnitedLex Corporation July 2016 – July 2017

- Designed and developed high-quality software applications by writing testable, efficient, well-documented code.
- Supported and worked with business users and product management to understand, analyze, and develop solutions to solve client-driven requirements.
- Utilized knowledge of a full range of technologies to implement intelligent UI/UX design, added functionality through a robust service-based architecture, and supported efficient database operations.
